

What is what

Owner rate set to the standard inbound resale price. October 2026.

1. The owner price

- **Customer pays \$0.35** per started minute, after 200 included minutes.
- That is the middle of the published inbound reseller band, **\$0.25 to \$0.45** a minute.
- Your vendors cost **\$0.0885**. You keep **\$0.2615** before the card fee.
- That is about **75%** of the minute. That is the standard gross profit on this product, not a wholesale pipe price.
- A marketing agency's whole-business profit is often 15% to 25% after people's time. This page prices the minute. It does not price your hours.

2. What each dollar is

- 1 **xAI, \$0.08**. The speech-to-speech minute. xAI bills your API key. The customer never sees this invoice.
- 2 **Twilio talk time, \$0.0085**. Inbound minute on a Canada or US local number. Twilio bills your Twilio account.
- 3 **Your cost, \$0.0885**. Those two lines added. Nothing else is inside the minute.
- 4 **Customer minute, \$0.35**. What Stripe charges the customer for one started minute past the included 200.
- 5 **Your profit on the minute, \$0.2615**. Customer price minus your cost. About 75 cents of each dollar.
- 6 **Card percent, about 2.9%**. Stripe keeps roughly 1 cent of the 35. It comes out of your profit, not out of xAI.
- 7 **Card fixed fee, \$0.30**. Charged once per successful charge, not once per minute. A monthly invoice absorbs it. A tiny top-up does not.
- 8 **Number, \$1.15 to you and \$19 to the customer**. Twilio's monthly rent versus your managed line. The \$17.85 gap covers the number, routing, and the pause-at-zero rule. It is not minute profit.
- 9 **Included minutes, 200**. Inside the \$19. Past that, the \$0.35 meter starts.
- 10 **Not profit**. Your time, failed calls you still ate, refunds, and any toll-free or outbound leg. Toll-free inbound is \$0.022, not \$0.0085. Outbound is \$0.014.

3. One 2-minute call

- Customer pays **\$0.70**.
- xAI plus Twilio cost about **\$0.18**.
- You keep about **\$0.52** before the card percent.
- The card percent on \$0.70 is about **\$0.02**.
- A 12-second call still bills one minute. That is where the profit holds.

4. What you do, in order

- 1 Leave xAI and Twilio billing you. You bill the customer. You are the merchant.
- 2 In Stripe, new product. Metered price **\$0.35** per unit. Second price **\$19** a month with 200 minutes included.

- 3 New webhook for Meridian only. Do not reuse another project's webhook secret. You may reuse the same live secret key.
- 4 Create an xAI key named meridian-voice. Fund about \$20 when you are ready to place a call.
- 5 Buy one Twilio local number. Do not port a customer number yet.
- 6 Paste the keys into Railway: XAI_API_KEY, Twilio SID and token, STRIPE_SECRET_KEY, STRIPE_VOICE_PRICE_ID, STRIPE_WEBHOOK_SECRET. Redeploy.
- 7 Call the staging number for about 20 seconds. The line is not live until that call is in the ledger.

Marking a step in the on-screen guide does not create the Stripe price or place the call.
