

Business plan

Managed voice receptionist for local service businesses.

Set 1 of 3 · Business plan

Prepared for discussion · 3 October 2026

Kenny Hunter · Toronto

Branch meridian-agency-2-0 at 89e6df70

Working draft. Not an offer of securities.

Confidential

1. Company

Meridian is a managed voice-receptionist product for local service businesses. The operator is Kenny Hunter, Toronto. The company sells an answering line that books, logs, and hands off. It does not sell developer minutes.

Source of record: GitHub agentbridgehq-oss/meridian, branch meridian-agency-2-0 at 89e6df70. Pull request 2 is open and unmerged. Master is 05a6bbcd.

2. Problem

- A missed call is a missed job. Shops, clinics, and trades cannot staff a desk all evening.
- Human answering services price by the call or by a small minute pack. Smith.ai AI plans are about \$1.60 to \$2.40 a call. Human packs start much higher.
- Wholesale voice pipes (Vapi, Retell, Bland) are cheap and unfinished. The owner still has to wire the phone, the calendar, and the bill.

3. Product

The phone path on the branch is PSTN to Twilio Elastic SIP to OpenAI Realtime, then Meridian tools into the customer's calendar or CRM only when that connector is verified. Tools fail closed. A booking is not claimed unless the customer system confirms it.

- Reception, booking, and service roles are written as expert playbooks.
- Deployment Core blocks go-live until credentials, acceptance, rollback, and client acceptance are recorded. Secrets are stored as hashes, not values.
- The line pauses at a zero balance. Short calls bill a started minute.

4. Stage, stated plainly

- No paying customer is recorded. No revenue is recorded. No round has closed.
- Railway answers health checks and is degraded because provider keys are not configured.
- No staging phone call is in the call ledger. The product is not live.
- The public letter site is on Netlify. The storefront still names older vendors in places. That copy is stale against the branch.

5. Price

The owner rate locked on 3 October 2026 is \$0.35 per started minute after 200 included minutes, plus \$19 a month for the managed line. Vendor cost used for the spread is \$0.0885 (speech \$0.08 plus Twilio inbound \$0.0085). Gross on the minute is \$0.2615 before card fees, about 75 percent. The branch file voice-minute-markup.mjs was last committed at \$0.24. The owner decision is \$0.35. The file has not been re-committed to that figure.

Line	Amount	Who pays
Speech minute	\$0.08	Vendor invoices Meridian
Twilio inbound local	\$0.0085	Vendor invoices Meridian
Customer minute	\$0.35	Customer pays Meridian
Owner gross on the minute	\$0.2615	Before the card fee
Managed line	\$19 / month	Includes 200 minutes

Line	Amount	Who pays
Twilio number rent	\$1.15 / month	Inside the \$19, not minute profit

6. Go to market

First buyers are Toronto-area trades, clinics, and salons that already lose after-hours calls. Sale is a managed line, not a kit. Cold email is parked. Canada's anti-spam law requires consent, identification, and an unsubscribe. Outreach does not send until that gate is on.

7. Twelve-month operating aim

These are aims, not a forecast and not booked revenue.

- 1 Prove one staging call on the ledger.
- 2 Put the \$0.35 metered price and the \$19 line on Stripe.
- 3 Install ten paying lines before hiring.
- 4 Keep Kenny out of the customer setup loop. The customer still clicks pay, forward, and calendar consent.

8. Risks

- No live call yet. A plan is not a phone line.
- Speech cost can move. The customer price stays published. It is not a live pass-through.
- A chatty number with no balance cap drains the vendor key. Pause at zero is the control.
- Calendar and CRM actions fail closed until the customer connector confirms.
