Control rules in the code

- 1 A deployment cannot activate without verified integrations, credential flags, acceptance evidence, a rollback owner, and client acceptance.
- 2 Unknown calls are rejected. Accepted calls fail safe if the sideband cannot attach.
- 3 Transfer is reported only after the provider confirms it.
- 4 Customer connectors are HTTPS, signed, idempotent, and timeout-bounded.
- 5 Tests exist for the agency suite. Regular CI on push is manual-only, after an earlier notification storm.
