

Product architecture

Call path, control plane, and what is not live.

Set 2 of 3 · Product

Prepared for discussion · 3 October 2026

Kenny Hunter · Toronto

Branch meridian-agency-2-0 at 89e6df70

Working draft. Not an offer of securities.

Confidential

1. Call path

- 1 A call hits a Twilio number.
- 2 Elastic SIP carries it to OpenAI Realtime.
- 3 Meridian's sideband attaches. If it cannot, the call fails safe.
- 4 Tools may check a calendar, book, log the outcome, upsert a lead, or request a handoff.
- 5 A tool succeeds only after the customer system returns ok and confirmed.
- 6 The call ledger stores the outcome. Keypad digits are not stored.

2. What is built

- Deployment Core: readiness, blockers, rollback, client acceptance, emergency pause.
- Provider registry and manifests. Secret values are not written into the ledger.
- Onboarding pack: greeting, after-hours line, forward instructions, calendar recipe, smoke questions.
- Expert playbooks for reception, booking, and service.
- Usage billing and a vendor spend log. No auto top-up.
- CASL gate for outreach. It does not send.

3. What is not built into a live line

- Railway has no provider keys. Health is degraded.
- No Twilio trunk and no staging number are confirmed in the ledger.
- Stripe metered price at \$0.35 is specified, not created.
- The markup module on the branch still shows the earlier \$0.24 figure.

4. Public fronts

- <https://meridian-open.netlify.app/>
- The agency letter pages exist in the repo. Kenny locked the current front on 14 September 2026. Do not publish a new agency site until he asks.
